Marvel App

/!\ Mandatory tech stack: React, Typescript

Required work:

- Create a React application that has 2 pages:
    - Home page: display Marvel characters(name, thumbnail) in form of cards using the Marvel api https://developer.marvel.com/ (the home page should be paginated).
    - Details page: by clicking on a character card from the home page the user should be redirected to the details page which should display the character thumbnail, name, description (if it exists) and a list of the series that the character has appeared in.
    - Push your work to a private github repo.
    - Avoid pushing the entire app in a single commit.

Bonuses:

- Use material ui library.
- Add search by name feature.
- Add sort by name (asc & desc).
- Add caching.
